PLATFORM EXECUTIVE SUMMARY · IN DEVELOPMENT

AiC3™

Executive Summary

AiC3™ is an enterprise control plane for distributed AI. It orchestrates models, agents, and workflows across teams and vendors with observability, policy, and accountability built into the substrate. AiC3 is the foundation that makes the rest of the Ai Tech Intel ecosystem operable at enterprise scale.

Category & Positioning

Category: AI Orchestration & Governance

Market Opportunity

Every large organization is now operating multiple AI systems from multiple vendors with no unified control surface. AiC3 addresses the resulting visibility, policy, and coordination gap across regulated enterprises, public agencies, and large operators.

Customer Profile

Enterprise IT, AI platform teams, CISOs, and regulated operators.

Revenue Model

- Annual enterprise license tied to orchestrated agent/workflow volume.
- Implementation and integration services for first-year deployments.
- Premium modules for compliance reporting, audit, and policy enforcement.

Competitive Advantage

- Vendor-neutral orchestration layer — does not depend on any single model provider.
- Built-in observability and policy controls, not bolted on later.
- Native interoperability with the rest of the Ai Tech Intel ecosystem.

Development Status

In Development — active engineering build. Pilot conversations open.

Roadmap

- Closed pilot deployments with anchor enterprise and public-sector partners.
- General availability of orchestration core and policy engine.
- Expanded connector library and compliance reporting modules.

Place in the Ai Tech Intel Ecosystem

Every Ai Tech Intel platform is built to operate on shared infrastructure and to compound the value of the broader portfolio. AiC3™ is the foundational orchestration layer; Commodexia™, T.E.A.M.S.™, TeaVib™, PCN™, and Academy™ are independent revenue lines that benefit from — and reinforce — that foundation.
